

KNOW-HOW FEBRUARY NEWSLETTER

Rumford Industrial Group Inc.

Is tank base corrosion creating a problem for your facility? Above ground storage tanks are susceptible to corrosion damage from intermittent water ingress at the chine angle or track under the tank base.

If the corrosion damage is left untreated, through-wall defects may occur, resulting in detrimental product loss and costly implications including:

- * Environmental Damage
- * Clean-up and Disposal Expense
- * Downtime
- * Safety Hazards

These costly after-effects can quickly and simply be prevented using the Belzona Tank Base Sealing Solution. By utilizing a cold applied cost effective Belzona repair and protection system the tank base can be sealed and weatherproofed, preventing moisture ingress into under-floor areas. This results in longer term corrosion protection and preservation of the tank base.

Belzona provided Tank Base Sealing Solution for this Facility

A routine inspection of a large storage tank found the base of the tank at the chine angle to be corroded due to water ingress. The corrosion was so extensive that if not addressed it would lead to complete replacement of the tank floor.

Belzona provided a cost effective solution to prevent water ingress and reduce further tank base corrosion. The full fix and costs for this solution were only 5% of the estimated replacement costs. The client has now applied the Belzona Tank Base Sealing Solution to additional storage tanks. Watch this Video showing a Tank Base Application with Belzona 3000 series products: [Tank Base Sealing Solution Video](#)

Belzona can provide the answer to tank base corrosion which will:

- * Increase Tank Storage Life
- * Avoid Demolition and Replacement
- * Eliminate the Danger of Repairs involving Hot Work
- * Reduce Environmental Damage
- * Minimize Production Downtime

For more information on how Belzona can solve your industrial repair or maintenance concerns call 800-336-2827 email us at office@rumfordgroup.com or visit our website at www.rumfordgroup.com. Call for your rep today.

Kind Regards,
