

BELZONA
KNOW-HOW

NEWSLETTER

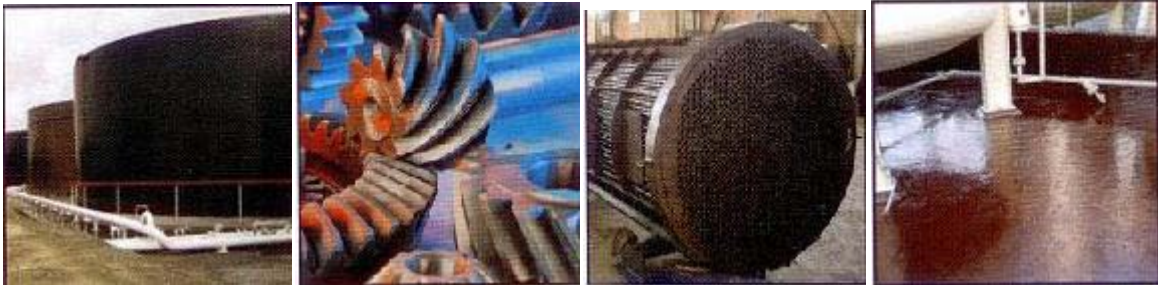

Hello,

Is January bringing additional maintenance issues along with the snow? Let me provide a brief review of how Belzona products can repair, protect and improve machinery and equipment.

Belzona has coatings designed for extreme operating conditions against abrasion, high temperature or chemical attack which are commonly found in containment areas, vessels, pumps and heat transfer equipment.

Belzona Repairs, Protects and Improves machinery and equipment from the effects of abrasion, erosion, corrosion and chemical attack.

From power generation to pulp and paper, sugar to marine, water processing to oil and gas, manufacturing and government facilities, Belzona provides protective coatings and repair composites to solve the maintenance issues that arise within most industries.

Belzona Repairs, Protects and Improves

Tanks - Pressure Vessels - Pumps - Gears - Valves - Pipes - Fittings - Conveyor Belt Systems - Heat Exchangers - Shafts - Drives - Keyways - Gaskets - Seals - Shims - Roofs - Floors - Walls - Fans - Blowers - Compressors - Chemical Containments - Buildings Facilities and More
